

SA HEALTH

Adelaide,
South Australia

The SA Health accommodation project is located on Levels 5 & 8 of the Citi Centre Building in the heart of the CBD. The main design objectives for this project was to create a new standard of work environment to accommodate future needs.

The design incorporates large open work areas and common shared facilities, including a library and work café area which improves interaction and encourages equity.

ESD design principles comprise an upgrade to the base building services, product and material selection, and a modular approach to the flexible work environment.
