

TWO WELLS MAIN STREET DESIGN GUIDELINES

Two Wells,
South Australia

The spatial, cultural and social character of the Town and Main Street was explored by JPE and WAX Design in this Urban Design project.

By amplifying these characteristics, the guidelines use a precinctural approach to the development of the Main Street, providing desired character statements, detailed guidelines for the built form and public realm, whilst delivering graphic illustrations of the Town's future character.

The form, scale and materiality of future development was evaluated through a consultative process with State Government, developers and Council before being tested with the community through focused workshops and exhibitions. The resulting guidelines embed these critical aspects as well as the community value of the town within a clearly defined development framework.
