

ZERO WASTE SA

Adelaide,
South Australia

Zero Waste SA is a change agent encouraging resource conservation at all levels of government, industry and households.

Zero Waste's relocation was promoted as a benchmark for a green office fitout within the parameters of an existing commercial building.

It incorporated numerous ESD principles including the selection of green products, materials and upgrade of the building services to minimise energy consumption.

Modularity and flexibility of the building elements was instrumental and almost 95% of the fitout can be recycled. The projects success was due to the collaborative approach and high level of customer satisfaction.

This project received a RAIA Commendation for Sustainable Architecture in 2006.
